

Toddler App Features Interactive Flash Cards

Melbourne, Australia - The much-loved flashcards for learning first words now comes in a kids app with additional interactive features. Independent kids app developer GiggleUp today released Toddler Sound 123, which includes over a hundred sounds and images for young children to tap and explore.

An app for learning first words, Toddler Sound 123 requires very basic navigation skills, as simple as one tap. The interface is child-friendly; the home screen features hand-drawn sketches of cartoon animals and objects that will appeal to kids. One tap and up pops a real life photograph of the object, accompanied by the sound that it makes and with its name spelled across the bottom of the screen. As this type of learning relies on repetition, multiple images of the same object have been included to make each tap a new experience. Images are organised into six categories, which includes popular kids themes - such as animals and vehicles - as well as other unique pictures, such as the ones of famous sights from around the world.

Stylish original drawings paired with high-definition real-life photograph makes this app a delightful visual experience. All the sounds used in the app are of very high quality, and the voice-overs are clear and pleasant. All recordings have been performed by native speakers of the 13 languages that are available in Toddler Sound 123, including English, Bokmål, Norwegian, Danish, Dutch, French, German, Italian, Japanese, Korean, Portuguese, Russian, Simplified Chinese, Spanish, Swedish and Traditional Chinese.

Available for download on: App Store, Google Play and Amazon Appstore

ABOUT GIGGLEUP

We are a team of designers and developers motivated by the same passion to create quality apps that can be enjoyed by kids and contribute to their learning. Our apps have received awards and recognition from various groups - among them are The Parents' Choice Foundation, Children's Technology Review, The New York Times and The Guardian. Some major areas of early childhood development our apps target include spatial reasoning, problem solving, first words, number literacy, preschool science, and more. All our apps comes fully available in

multiple languages. Our voice recordings are produced in-house and are performed by native speakers of the chosen language to ensure the highest quality and accuracy is achieved. We reside in the beautiful city of Melbourne, Australia, where our days are spent working away on the next new app, or enjoying a good cup of coffee.
